

PRINTED SHEET PROTECTOR SYSTEM AND METHOD

Abstract of the Disclosure

In addition to a set of dividers having staggered tabs and binder holes, the retail
5 packaging includes a sheet protector pocket having a front sheet and a back sheet and binder
holes. The user removes the dividers and pocket from the packaging and custom designs and
prints sheet indicia on a paper sheet. He/she then inserts the printed sheet into the pocket
whereby the front sheet allows the sheet indicia to be viewed therethrough. The front sheet has
pre-printed indicia thereon. With the printed sheet in the pocket and the pocket and dividers
10 assembled in a ringed notebook or other binding system, the sheet indicia and the pre-printed
indicia line up with respective ones of the tabs. The indicia thereby form an attractive custom-
designed table of contents, which can be easily corrected or changed by the user by simply
printing and inserting into the pocket a new sheet. The front sheet can either be transparent or
have a window to allow the sheet indicia to be viewed therethrough. An alternative provides the
15 pre-printed or custom-printed indicia on a separate transparent sheet which is inserted in the
pocket in front of the printed sheet. Another invention is a pocket assembly having front and
back sheets and binder holes and compartments for inserting therein one or more photographs,
other images or the like, which can be viewed through the transparent front sheet. Pre-printed
framing designs on the front sheet attractively encircle the photographs.
